

# PILLOBALLS

- PILLOBALL Spherical Bushings - Insert Type
- PILLOBALL Rod Ends - Insert Type
- PILLOBALL Rod Ends - Die-cast Type
- PILLOBALL Rod Ends - Maintenance-free Type

## Structure and Features

IKO PILLOBALLs are compact self-aligning spherical bushings that can support a large radial load and a bi-directional axial load at the same time.

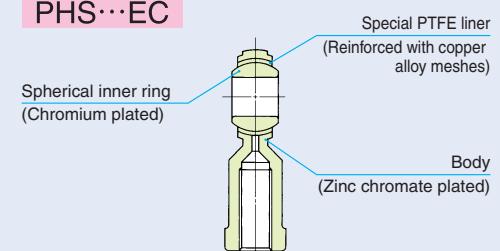

These bushings are classified by sliding surface types, namely, insert type, die-cast type and maintenance-free type. In the insert type, a spherical inner ring makes contact with the special copper alloy bushing with superior run-in properties. In the die-cast type, a spherical inner ring makes direct contact with the bore surface of the body of special zinc die-cast alloy. In the maintenance-free type, a spherical inner ring makes contact with the special PTFE liner of maintenance-free type. Thus, a smooth rotational and oscillatory motion can be achieved with superior anti-wear and loading properties in each type.

PILLOBALL Rod Ends have either a female thread in the body or a male thread on the body, and they can be easily assembled onto machines.

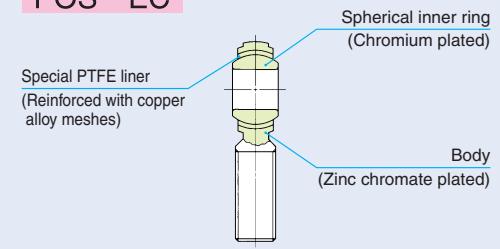

PILLOBALLs are used in control and link mechanisms in machine tools, textile machines, packaging machines, etc. The maintenance-free type is especially suitable for loading in one direction and is the best choice for machines in which oil must be avoided such as food processing machines, or machines which cannot be re-lubricated.

## Types

In PILLOBALLs, the types shown in Table 1 are available.

**Table 1 Type**

Type	Lubrication type		Maintenance-free type	
	Spherical Bushings	Rod end	Rod end	Rod end
Insert type	PB	PHS · PHSB	POS · POSB	PHS · EC
Die-cast type	—	PHSA	—	POS · EC

### Lubrication Type PILLOBALL Spherical Bushings

#### Insert Type PB

This type has superior anti-wear properties and high rigidity. It consists of a spherical inner ring, an outer ring, and a bushing of special copper alloy with superior run-in properties inserted in between. The spherical surface of the inner ring is chromium plated after heat treatment and grinding. This type is assembled with a shaft and a housing.

When especially large radial and/or axial loads are applied, Spherical Bushings with molybdenum disulfide ( $\text{MoS}_2$ ) treated inner and outer rings are recommended. (See page J17.)

### Lubrication Type PILLOBALL Rod Ends

#### Insert Type PHS, POS, PHSB and POSB

This type has superior anti-wear and anti-corrosion properties as well as high rigidity. It consists of a spherical inner ring of which spherical surface is chromium-plated after heat treatment and grinding, a body with a zinc chromate treated outer surface, and an inserted bushing of special copper alloy having superior run-in properties. This type includes PHS and PHSB, which has a female thread in the body, and POS and POSB, which has a male thread on the body.

### Lubrication Type PILLOBALL Rod Ends Die-cast Type PHSA

The spherical inner ring of this type is mirror-finished after heat treatment and is built in a body of die-cast special zinc alloy. The sliding surfaces of the inner ring and body are in close contact with each other. Thus, this type is an economical rod end with superior anti-wear and loading properties.

### Maintenance-free Type PILLOBALL Rod Ends PHS · EC, POS · EC

This type has superior anti-corrosion properties as the body is zinc chromate treated and the spherical inner

ring is chromium plated on the sphere surface after heat treatment and grinding.

A special PTFE liner, reinforced with copper alloy meshes, which is superior in anti-wear properties with little creep deformation is used for lining on the sliding surface of the body, and this type is maintenance-free.

PHS · EC, which has a female thread in the body, and POS · EC, which has a male thread on the body, are available.

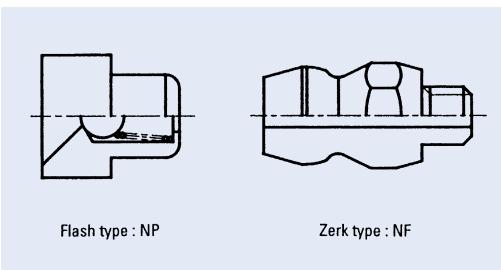

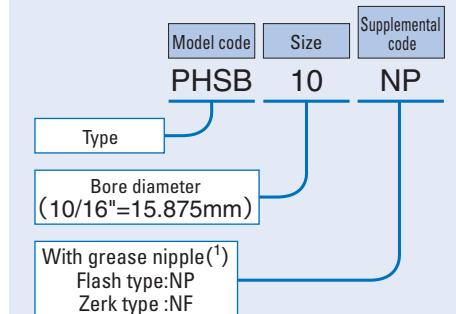

Fig. 1 Shapes of grease nipple

## Identification number

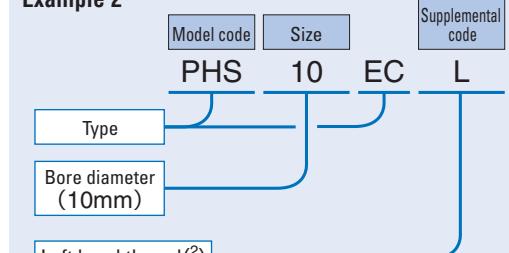

The identification number of PILLOBALLs consists of a model code, a size and any supplemental codes as shown in the examples.

### Examples of identification number

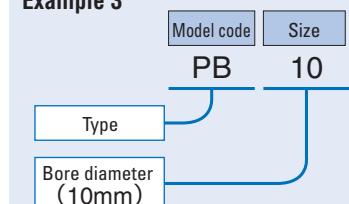

**Example 1**

**Example 2**

**Example 3**

Notes<sup>(1)</sup> Shapes of grease nipple are shown in Fig.1. In case of no indication of grease nipple type, grease nipple is not prepared.

<sup>(2)</sup> Right hand thread is indicated with no code.

## Accuracy

The accuracy of PILLOBALLs is shown in Tables 2 and 3. The maximum radial internal clearance of the insert type is 0.035 mm.

**Table 2 Tolerance**

Type	Dimension	Dimension symbol	Tolerance	
			unit: mm	
PB	Bore dia. of inner ring	d	H7	
	Outside dia. of outer ring	D	h6	
	Width of inner ring	B	0 -0.1	
	Width of outer ring	C	±0.1	
PHS POS PHS · EC POS · EC	Bore dia. of inner ring	d	H7	
	Width of inner ring	B	0 -0.1	
PHSB POSB	Bore dia. of inner ring	d	+0.038 -0.013	
	Width of inner ring	B <sub>1</sub>	0 -0.127	
PHSA	Bore dia. of inner ring	d	+0.063 -0.012	
	Width of inner ring	B	See Table 3.	

**Table 3 Tolerance of width B of inner ring of PHSA type** unit: mm

Nominal bore dia. of inner ring	$\Delta_{B_s}$			
	Over	Incl.	High	Low
—	14	14	0	-0.2
14	20	20	0	-0.3
20	22	22	0	-0.4

## Fit

Recommended fits for PILLOBALLs are shown in Table 4.

**Table 4 Recommended fits**

Condition	Tolerance class	
	Shaft	Housing bore <sup>(1)</sup>
Normal operation	h7	H7
Directionally indeterminate loading	n6, p6	N7

Note<sup>(1)</sup> This is applicable to PILLOBALL Spherical Bushings, Insert type.

## Selection of PILLOBALL

Load capacities of PILLOBALLs are determined based on the allowable contact pressure on sliding surfaces and the strength of body for each type. Thus, a suitable type and size should be selected based on the dynamic load capacity  $C_d$  and static load capacity  $C_s$  shown in the dimension tables.

### Load capacity

#### ① Dynamic load capacity

The dynamic load capacity  $C_d$  is obtained on the basis of the contact pressure on the sliding surface. The dynamic load capacity is used for calculating the life.

The dynamic load capacity considering temperature increase is obtained from the following equation using the temperature factor, which is a correction factor for the effect of PILLOBALL temperature.

$$C_{dt} = f_t C_d \quad \dots \dots \dots (1)$$

where,  $C_{dt}$  : Dynamic load capacity considering temperature increase, N

$f_t$  : Temperature factor (Refer to Table 5.)

$C_d$  : Dynamic load capacity, N (Refer to the dimension tables.)

**Table 5 Temperature factor  $f_t$**

Type	Temperature °C						
	-30	+80	+90	+100	+120	+150	+180
PB PHS, POS PHSB, POSB	1	1	1	1	1	0.7	
PHS · EC POS · EC	1	1	0.9	0.75	0.55	—	

#### ② Static load capacity

The static load capacity  $C_s$  is the maximum static load that can be applied on the PILLOBALL without breaking the inner or outer ring of the PILLOBALL Spherical Bushing (or the inner ring or body of the PILLOBALL Rod End), and without causing severe permanent deformation that will make the PILLOBALL unusable.

K

PB  
PHS  
PHSB  
POS  
POSB  
PHSA

## Maximum Operating Load

The recommended value of bushing load is obtained by multiplying the dynamic load capacity  $C_d$  by a numerical factor, which differs depending on the bushing type and load condition. For PILLOBALL Rod Ends, the static load capacity  $C_s$  must also be considered in determining the applicable bushing load. Table 6 shows the guidelines for maximum operating load of PILLOBALLS. When axial loads are added in addition to radial loads, bending stress occurs in the body. Pay attention to this bending stress.

**Table 6 Maximum operating load**

Type	Load direction	
	Constant	Alternate
PB	$\leq 0.3C_d$ ( $\leq C_s$ )	$\leq 0.6C_d$
PHS, POS, PHSB, POSB	$\leq 0.3C_d$ ( $\leq 0.3C_s$ )	( $\leq 0.6C_d$ ) $\leq 0.2C_s$
PHSA		$\leq 0.16C_s$
PHS-EC, POS-EC	( $\leq C_d$ )	$\leq 0.3C_s$ ( $\leq 0.5C_d$ ) $\leq 0.2C_s$

Remark  $C_d$  is the dynamic load capacity and  $C_s$  is the static load capacity.

When the magnitude of applied load is within the value shown outside the parenthesis, it is also within the value in the parenthesis.

## Equivalent radial load

PILLOBALLS can take radial and axial loads at the same time. When the magnitude and direction of loads are constant, the equivalent radial load can be obtained by the following formula.

$$P = F_r + YF_a \quad (2)$$

where,  $P$  : Equivalent radial load, N

$F_r$  : Radial load, N

$F_a$  : Axial load, N

$Y$  : Axial load factor (Refer to Table 7.)

**Table 7 Axial load factor  $Y$**

$F_a/F_r$	0.1	0.2	0.3	0.4	0.5	> 0.5
Type						
PB	1	2	3	4	5	Unusable
PHS, POS PHSB, POSB	1	2	3	4	5	Unusable
PHS-EC POS-EC	1	2	3			Unusable

## Life

The life of PILLOBALLs is defined as the total number of oscillating motions during which the PILLOBALLs can be operated without failure or malfunction due to wear, increase in internal clearance, increase in sliding torque and operating temperature, etc.

As the actual life is affected by many factors such as the material of the sliding surface, the magnitude and direction of load, lubrication, sliding velocity, etc., the calculated life can be used as a measure of expected service life.

### ① Life of lubrication type PILLOBALLs

PB · PHS · POS · PHSB · POSB

#### [1] Confirmation of $pV$ value

Before attempting to calculate the life, make sure that the operating conditions are within the permissible range by referring to the  $pV$  diagram in Fig.2.

When the operating conditions are out of the permissible range, please consult IKO.

The contact pressure  $p$  and the sliding velocity  $V$  are obtained from the following formulae.

$$p = \frac{50P}{C_{dt}} \quad (3)$$

$$V = 5.82 \times 10^{-4} d_k \beta f \quad (4)$$

where,  $p$  : Contact pressure, N/mm<sup>2</sup>

$P$  : Equivalent radial load, N

(Refer to Formula (2).)

$C_{dt}$  : Dynamic load capacity considering temperature increase, N

(Refer to Formula (1).)

$V$  : Sliding velocity, mm/s

$d_k$  : Sphere diameter, mm

(Refer to the dimensional tables.)

$2\beta$  : Oscillating angle degrees (Refer to Fig.2.)

when  $\beta < 5^\circ$ ,  $\beta = 5$

when rotating,  $\beta = 90$

$f$  : Number of oscillations per minute, cpm

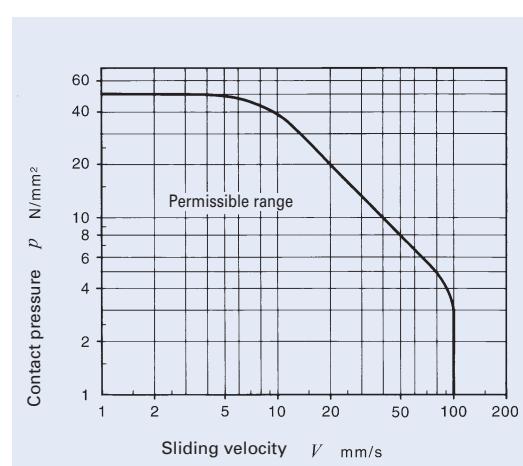

Fig. 2  $pV$  diagram of lubrication type PILLOBALLs

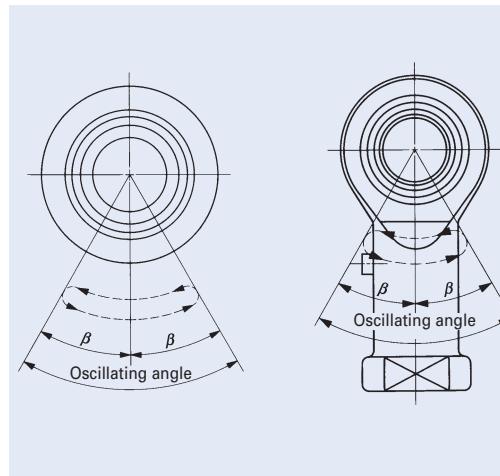

Fig. 3 Oscillating angle

#### [2] Life calculation

The life of lubrication type PILLOBALLs can be calculated by the following formulae.

$$G = \frac{3.18 b_1 b_2 b_3}{\sqrt{d_k \beta}} \left( \frac{C_{dt}}{P} \right)^2 \times 10^5 \quad (5)$$

$$L_h = \frac{G}{60f} \quad (6)$$

where,  $G$  : Life (Total number of oscillations)

$b_1$  : Load directional factor (Refer to Table 8.)

$b_2$  : Lubrication factor (Refer to Table 8.)

$b_3$  : Sliding velocity factor (Refer to Fig. 3.)

$C_{dt}$  : Dynamic load capacity considering temperature increase, N

(Refer to Formula (1).)

$P$  : Equivalent radial load, N

(Refer to Formula (2).)

$L_h$  : Life in hours, h

$f$  : Number of oscillations per minute, cpm

**Table 8 Load directional factor  $b_1$  and lubrication factor  $b_2$  for lubrication type PILLOBALLs**

Load directional factor $b_1$		Lubrication factor $b_2$	
Load direction		Periodical lubrication	
Constant	Alternate	None	Regular
1	5	1	15

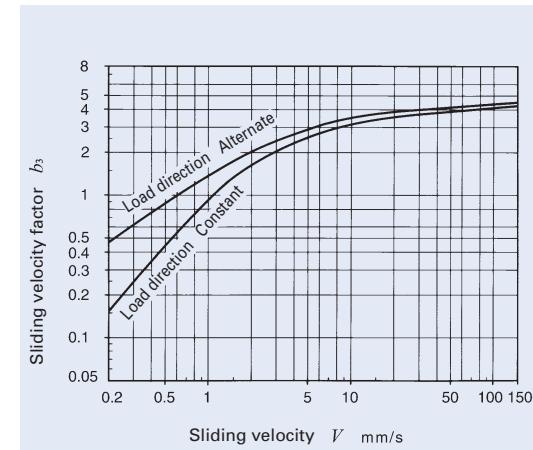

Fig. 4 Sliding velocity factor for lubrication type PILLOBALLs

### ② Life of maintenance-free type PILLOBALLs PHS-EC·POS-EC

#### [1] Confirmation of $pV$ value

Before attempting to calculate the life, make sure that the operating conditions are within the permissible range by referring to the  $pV$  diagram in Fig.4.

When the operating conditions are out of the permissible range, please consult IKO.

The contact pressure  $p$  and sliding velocity  $V$  are obtained from Formulae (3) and (4) on page K6.

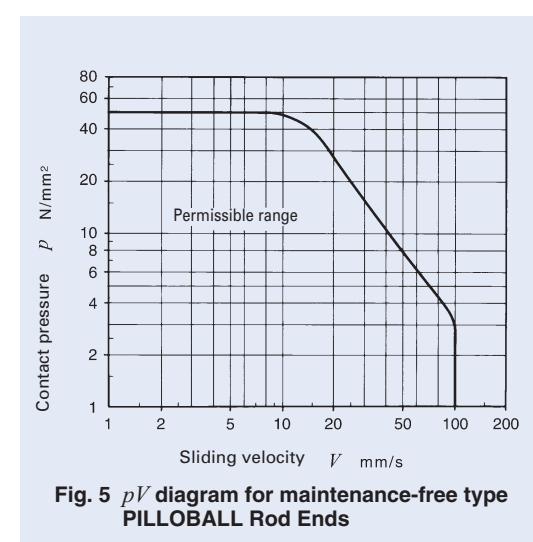

Fig. 5  $pV$  diagram for maintenance-free type PILLOBALL Rod Ends

## [2] Life calculation

The life of maintenance-free type PILLOBALL Rod Ends is obtained from the total sliding distance  $S$  which is given in Fig.5 for the contact pressure  $p$  obtained from Formula (3).

The total number of oscillations and life in hours can be obtained from the following formulae.

$$G = 16.67 \times b_1 \times \frac{Sf}{V} \quad \dots\dots\dots(7)$$

$$L_h = \frac{G}{60f} \quad \dots\dots\dots(8)$$

where,  $G$  : Life (Total number of oscillations)

$b_1$  : Load directional factor (Refer to Table 9.)

$S$  : Total sliding distance m

$f$  : Number of oscillations per minute cpm

$V$  : Sliding velocity mm/s

$L_h$  : Life in hours h

Table 9 Load directional factor for maintenance-free type PILLOBALLs  $b_1$

Load direction	Constant	Alternate
Load directional factor $b_1$	1	0.2 <sup>(1)</sup>

Note<sup>(1)</sup> This value is applicable when the load changes comparatively slowly. When the load changes rapidly, please consult IKO, as the factor degrades sharply.

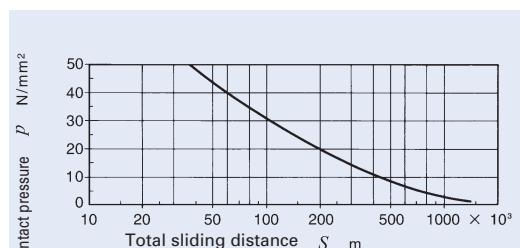

Fig. 6 Contact pressure and total sliding distance for maintenance-free type PILLOBALL Rod Ends

## Lubrication

Maintenance-free type PILLOBALL Rod Ends have a sliding surface lined with a self-lubricating lining. Therefore, they can be used without lubrication.

Lubrication type PILLOBALLs are not provided with prepacked grease. Perform proper lubrication for use. Operating without lubrication will increase the wear of the sliding contact surfaces and cause seizure.

## Oil Hole and Grease Nipple

Table 10 shows the specifications of oil hole and grease nipple on the outer ring or body. When a grease gun that fits the grease nipple is required, please contact IKO.

For PILLOBALLs without an oil hole and grease nipple, apply grease directly on the spherical surface.

Table 10 Specifications of oil hole and grease nipple

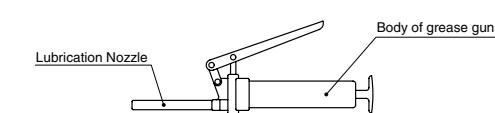

Type	Bore diameter of inner ring $d$ mm	Specification
PB		1 oil hole + oil groove
PHS	$d \leq 4$	None
	$4 < d$	With grease nipple
POS	$d \leq 4$	None
	$4 < d \leq 6$	1 oil hole
	$6 < d$	With grease nipple
PHSB · POSB		None <sup>(1)</sup>
PHSA		With grease nipple
PHS · EC, POS · EC		None

Note<sup>(1)</sup> Grease Nipple is available for size 4 or larger with supplemental code.

Table 11 Types and Dimension of Lubrication Nozzles

Type	Dimension
A-5126T	
A-5120R	
B-5120R	

Remark HSP-3(Yamada Corporation)can be used for them.  
The above nozzles can be attached on the standard grease gun shown below.

## Operating Temperature Range

The maximum allowable temperature for Lubrication type PILLOBALLs is +180°C for the insert type and +80°C for the die-cast type.

The maximum allowable temperature for Maintenance-free type PILLOBALL Rod Ends is +150°C.

## Precautions for Use

### ① Tightening depth

The recommended tightening depth of the screw into the PILLOBALL Rod End body is shown below.

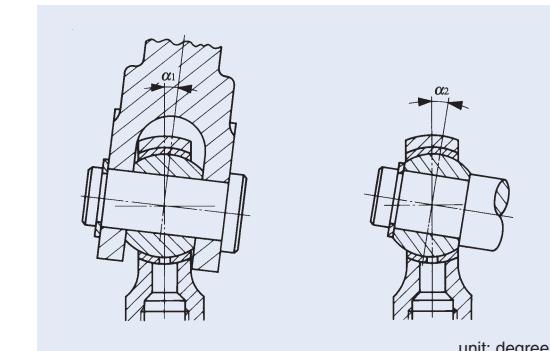

Insert type and maintenance-free type: 1.25 times the nominal thread dia. or more.

Die-cast type: 2 times the nominal thread dia. or more.

### ② Allowable tilting angle

The allowable tilting angle differs depending on the mounting structure as shown in Table 11.

Table 12 Allowable tilting angle

Note<sup>(1)</sup> Minimum allowable value of chamfer dimension  $r_s$ Remarks1. Neither oil hole nor grease nipple is provided for POS with an inner ring bore diameter  $d$  of 4 mm or less.For those with an inner ring bore diameter  $d$  of 5 to 6 mm, an oil hole is provided on the body. For others, a grease nipple is provided on the body.

2. Not provided with prepacked grease. Perform proper lubrication for use.

3. When a metric fine thread specification is required, please contact IKO.
